

Deepraj Adhikary is a Consultant in the Financial Services Group at Capgemini Solutions Canada Inc., with approximately seven years of progressive experience in the Wealth Management industry. Over his career, he has developed specialized expertise across Development, Technical Systems Analysis, Quality Engineering, Test Data Management, and Model-Based Test Automation, areas that require niche technical and domain knowledge not commonly found together in the labour market.

He possesses strong functional and technical understanding of Wealth Management concepts, including data architecture, data flows, and integrations between source systems and downstream applications. This has positioned him as a key contributor in projects requiring deep knowledge of enterprise-level financial data ecosystems.

Deepraj currently works as a Technical Systems Analyst, a hybrid role involving development, solution design, and Business Analyst responsibilities. He has in-depth knowledge of RBC's integrated data systems and their end-to-end connectivity. His technical proficiency spans Quality Engineering practices, data generation, data maintenance, and ensuring accurate data propagation across complex downstream applications. His capabilities are further strengthened by hands-on experience with system configuration and industry-leading tools such as RBC's iCAP Codeless Automation platform, major DBMS technologies, Python, Windows Server environments, and various automation frameworks.

In his previous role, he also led a team of seven Quality Engineers responsible for testing a client-facing web application, ClientSource. Under his leadership, the team implemented advanced testing methodologies that supported RBC in generating reliable business insights, ultimately contributing to improved products and services for Wealth Management clients.

Deepraj's technical and analytical skillset includes expertise in Python, NodeJS, Automation Testing, Manual Testing, API Testing, Test Data Engineering, Test Data Consultation, Test Data Management, Quality Engineering, Business Process Re-engineering, and Solution Analysis. He also contributes to defining and validating complex data flows across multiple integrated systems.

His combined experience in financial-domain systems, proprietary tools, automation technologies, and data-engineering practices makes him uniquely qualified to support critical Wealth Management initiatives in Canada that require highly specialized, hard-to-source expertise.

Highlights of Professional Experience

Capgemini Solutions Canada Inc. – Consultant / Technical Business Analyst

Client – Royal Bank of Canada: Canadian Wealth Management

Work Location – Toronto, Canada

November 2024 - Present

- ❑ In his role as the Technical Business Analyst for Client-Account Opening Services within Royal Bank of Canada's Wealth Management division, he works on the application 'ClientSource', a repository of client and account data. It is web-based application where RBC Investment Advisors could search through client's information and maintain it. His expertise in the domain and meticulous testing earned him a collection of heartfelt client appreciations.
- ❑ Responsibilities and Accomplishments:
 - Conduct architecture and design assessments to determine the scope of testing activities
 - Develop test case scenarios, test strategies, and plans for applications undergoing development or enhancement

- Support the project team in understanding system impacts, data flows, and identifying complete, testable scenarios
- Collaborate with business stakeholders to gather requirements for new features or enhancements
- Document business and technical requirements, prepare supporting documentation, and participate in solution design discussions to ensure accurate and efficient product delivery
- Identify, track, and communicate release milestones, project-specific timelines, dependencies, risks, issues, and assumptions within an agile project environment
- Develop and maintain functional business models that represent end-to-end system behavior
- Create structural and activity diagrams in an agile testing environment to support Minimum Viable Product (MVP) delivery
- Determine required inputs, data conditions, and configure these in Postman and Copilot-enabled tools to generate effective test cases
- Identify, reproduce, and analyze software defects by reviewing logs, data outputs, and system behavior
- Provide clear and detailed defect information to development teams and track issues through resolution using JIRA until completion in the product backlog
- Prepare and maintain various application artifacts, including business use cases, context diagrams, test models, test scripts, test scenarios and results, training documentation, data flow diagrams, and data refresh processes using MS Visio and GitHub
- Collect project metrics, compile statistics, and publish dashboards and status reports for stakeholders using Confluence, MS Excel, and Jira
- Establish and maintain productive working relationships with clients and external vendors to support activities related to Wealth Management Business Analysis

Capgemini Solutions Canada Inc. – Consultant / Onshore QE Team Lead**Client – Royal Bank of Canada: Canadian Wealth Management****Work Location – Toronto, Canada****October 2022 - November 2024**

- ❑ In his role as the Onshore Quality Engineer Lead for Client-Account Opening Services within Royal Bank of Canada's Wealth Management division, he works on the application 'ClientSource', a repository of client and account data. It is web-based application where RBC Investment Advisors could search through client's information and maintain it. His expertise in the domain and meticulous testing earned him a collection of heartfelt client appreciations.
- ❑ Responsibilities and Accomplishments:

 - Maintaining and Administring end-to-end data flow from the source to downstream applications.
 - Meeting with customers on a regular basis for project deliverables and collect testing and project requirements.

- Review deployment packages and coordinate deployment activities.
- Identify cost reduction areas and implement optimized solutions to increase the profitability of organization.
- Specialized knowledge in data flows & data creation mechanisms of wealth management applications.
- Fulfilling Test data requests from Downstream applications and Test data Management
- Maintaining Integrity and data flow from Source to Downstream applications.
- Conduct Self Review, Peer Review and participate Customer Review
- Update the test cases based on the review comments received.
- Responsible to plan, create, update and manage smoke and regression test cases and Automation suit.
- Defect Reporting, and Defect Maintenance.
- Run smoke test suite once the build has been implemented in QA environment.
- Identifies, analyzes and documents defects using a defect management system.
- Preparing signoff documents for every release.
- Support business team during the Operations Acceptance Testing and PIV (Post Implementation Validation) test phase and present the product/application to all the stake holders.
- Review offshore deliverable, suggest corrections as needed.
- API Automation on RBC's iCAP Automation tool

Capgemini Technology Services India Limited – Consultant / Offshore QE Team Lead**Client – Royal Bank of Canada: Canadian Wealth Management****Work Location – Hyderabad, India****April 2022 - October 2022**

- ❑ In his role as the Offshore Quality Engineer Lead for Client-Account Opening Services within Royal Bank of Canada's Wealth Management division, he works on the application 'ClientSource', a repository of client and account data. It is web-based application where RBC Investment Advisors could search through client's information and maintain it. His expertise in the domain and meticulous testing earned him a collection of heartfelt client appreciations.
- ❑ Responsibilities and Accomplishments:
 - Responsible for ensuring that the application complies with regulatory requirements during testing and release cycles.
 - Maintaining and Administring end-to-end data flow from the source to downstream applications.
 - Meeting with the Onshore team on a regular basis for project deliverables updates, to collect testing and project requirements.
 - Review deployment packages and coordinate deployment activities with the onshore team.
 - Specialized knowledge in data flows & data creation mechanisms of wealth management applications.
 - Fulfilling Test data requests from Downstream applications and Test data Management

- Maintaining Integrity and data flow from Source to Downstream applications.
- Conduct Self Review and Peer Review with the Offshore & Onshore team
- Update the test cases based on the review comments received.
- Responsible to plan, create, update and manage smoke and regression test cases and Automation suit.
- Defect Reporting, and Defect Maintenance.
- Run smoke test suite once the build has been implemented in QA environment.
- Identifies, analyzes and documents defects using a defect management system.
- Preparing signoff documents for every release.
- Review deliverable with the offshore & onshore teams, suggest corrections as needed.
- API Automation on RBC's iCAP Automation tool

Capgemini Technology Services India Limited – Associate Consultant / QE Test Data Analyst**Client – Royal Bank of Canada: US Wealth Management****Work Location – Hyderabad, India****July 2020 - April 2022**

- ❑ He worked as a Quality Engineer for Test Data Management for Royal Bank US's Wealth management wing. TDM solution involved implementing Test Data Management portal which is integrated with wealth management source systems to demonstrate how development and testing can be accelerated with professionally managed test data. This led to faster provisioning of Agile and DevOps workflows. He received multiple client appreciations for his excellence.
- ❑ Responsibilities and Accomplishments:
 - Testing and Administering the Test Data Management portal with self-serve functionalities.
 - Maintaining and Administering 'Capgemini Test Data Synthesizer' for data masking and data generation leveraging RBC's account on-boarding system.
 - Co-ordinate and Complete data refresh activities as part of Environment Management in Source systems.
 - Perform Data Masking/Obfuscation on refreshed data from Prod by designing masking scripts.
 - Analyze project data needs and propose best feasible solutions with the principles of Data Profiling and Sub setting.
 - Integration of CA Test Data Manager to expose data management for an industry leading experience.
 - Identify and fulfill data issues pertaining to various source systems.
 - Perform data Identification, Generation and Subsetting for various project data requirements on multiple source systems.
 - Test bed preparation for multiple US wealth management systems to efficiently complete testing.
 - Maintenance and Administration of efficient test account management platform (RBC Refresh Dashboard) used across RBC wealth management unit which involved vendor inputs.

- Review deployment packages and coordinate deployment activities.
- Identify cost reduction areas and implement optimized solutions to increase the profitability of organization.
- Specialized knowledge in data flows & data creation mechanisms of wealth management applications.
- Produce reports on data requests reflecting SLAs achieved and Return on Investments.
- Provided training on data management solutions to wealth management line of business users and other data analysts.
- Implemented various data management accelerators based on VBA and Selenium.
- Gather requirements from Customers and 3rd party vendors.
- Analyze the requirements, collect the queries related to the requirements and get them resolved by the business team/vendor team.
- Conduct Self Review, Peer Review and participate Customer Review
- Update the test cases based on the review comments received.
- Responsible to plan, create, update and manage smoke and regression test cases of RBC Refresh Dashboard application.
- Defect Reporting, and Defect Maintenance.
- Run smoke test suite once the build has been implemented in QA environment.
- Identifies, analyzes and documents defects using a defect management system.
- Preparing signoff documents for every release.
- Support business team during the Operations Acceptance Testing and PIV (Post Implementation Validation) test phase and present the product/application to all the stake holders.
- Review offshore deliverable, suggest corrections as needed and report details to Onshore Lead.

Capgemini Technology Services India Limited – Sr. Software Engineer / QE Test Data Analyst**Client – Royal Bank of Canada: US Wealth Management****Work Location – Bengaluru, India****July 2019 - July 2020**

- ❑ He worked as a Manual Tester for Docupace - Account Opening Service (AOS) for Royal Bank US's Wealth management wing. This involved testing the application's functionality and also the End-to-End working of the application. He also worked as a Test Data Engineer for various other Royal Bank US's Wealth management wing. This involved Generating and managing test data created for the application's functionality and also the End-to-End testing teams. He received multiple client appreciations for his excellence.
- ❑ Responsibilities and Accomplishments:
 - Collecting requirements from the Customer and 3rd party vendor.
 - Understanding the User Stories based on the requirements.
 - Designing Test Cases based on the user stories.
 - Defect Reporting, Defect Triage and Defect Maintenance.

- Reporting defects using a Defect Management Tool
- Generating Test data based on the user stories & requirements.
- Proposed various options available for a better data management system.
- Perform Data Masking on refreshed data from Prod
- Maintain RBC wealth management Dashboard to manage test accounts
- Perform data Identification, Generation and Sub setting for various project data requirements on multiple source systems
- Test bed preparation for multiple US wealth management systems to efficiently complete testing

Capgemini Technology Services India Limited – Analyst / QE Test Data Analyst**Client – Royal Bank of Canada: US Wealth Management****Work Location – Bengaluru, India****June 2018 - July 2019**

- ❑ He worked as a Test Data Engineer for Royal Bank US's Wealth management wing. This involved Generating and managing test data created for the application's functionality and also the End-to-End testing teams. He received multiple client appreciations for his excellence.
- ❑ Responsibilities and Accomplishments:
 - Collecting requirements from the Customer and 3rd party vendor.
 - Understanding the User Stories based on the requirements.
 - Generating Test data based on the user stories & requirements.
 - Proposed various options available for a better data management system.
 - Perform Data Masking on refreshed data from Prod
