

Raj

SUMMARY

Create an interactive portfolio that reflects who I am rather than simply listing my work history.

PROJECTS

Raj's Interactive Portfolio | An interactive portfolio experience focused on demonstrating systems thinking across Business Analysis, Development, and Quality Engineering.

HueType | Feature personal projects such as HueType.

TECHNICAL SKILLS

Systems Thinking
Business Analysis
Enterprise Software
Software Development
Quality Engineering
Product Thinking
Curiosity
Continuous Learning
Simplicity within Complexity
Next.js
React
TypeScript
Tailwind CSS
Motion (Framer Motion)
MDX for content
Vercel deployment
AI-assisted development
System design
Accessibility
Motion design
Developer experience
Product thinking

VISION

Create an interactive portfolio that reflects who I am rather than simply listing my work history. The portfolio should feel like exploring the mind of someone who understands complex systems. It should demonstrate my ability to bridge business analysis, software development, and quality assurance. The experience should feel modern, thoughtful, playful, and memorable without becoming overwhelming or gimmicky. Visitors should leave with the impression: Raj is someone I would trust to understand, design, improve, and maintain complex software systems. The portfolio is not intended to be a resume website. It is intended to be an experience.

AUDIENCE

Primary Audience: Hiring Managers, Technical Managers, Product Managers, Engineering Managers, CTOs, Recruiters. Secondary Audience: Developers, Designers, Business Analysts, QA Engineers, Anyone interested in my work.

PORTFOLIO NARRATIVE

The visitor should gradually discover: 1. Who I am 2. How I think 3. How I solve problems 4. What I have built 5. Why I approach software differently. The website should tell a story rather than display isolated pages.

DESIGN PHILOSOPHY

Minimal, Elegant, Calm, Interactive, Modern, Typography-first, Whitespace-heavy, Motion-driven, Professional, Creative without feeling childish. The design should never look like: a dashboard, a Bootstrap template, a resume builder, a generic developer portfolio, an over-the-top gaming website.

EMOTIONAL GOALS

The visitor should feel: Curious, Comfortable, Engaged, Impressed, Inspired, Confident in my expertise.

TONE

Thoughtful, Honest, Confident, Intelligent, Friendly, Curious. Avoid corporate buzzwords. Avoid exaggerated claims.

PRIMARY SECTIONS

Home; How I Think; The Three Perspectives; Case Studies; Projects; Documentation Showcase; Lessons Learned; Currently Exploring.

MOTION DESIGN

Animations should be meaningful rather than decorative: smooth page transitions, scroll-triggered reveals, animated diagrams, expandable process flows, interactive timelines, hover interactions, subtle parallax, morphing layouts. Animations should improve understanding rather than distract.

VISUAL STYLE

Typography should be the primary visual element. Use restrained colors with thoughtful accents. Allow whitespace to create breathing room. Avoid visual clutter. Every interaction should feel intentional.

ACCESSIBILITY

The website should meet modern accessibility standards: keyboard navigation, screen reader support, sufficient color contrast, reduced motion support, semantic HTML.

PERFORMANCE

Target: Lighthouse score above 90, Fast page loads, Optimized animations, Responsive across devices.

AI DESIGN INSTRUCTIONS

The AI should behave as: Senior UX Designer, Creative Director, Product Designer, Frontend Architect, Motion Designer. The AI should challenge ideas that reduce clarity or professionalism rather than implementing every suggestion literally. Design decisions should always reinforce the portfolio's central narrative: demonstrating how I

think through complex systems. The AI should avoid generic portfolio layouts and instead create an experience that feels unique, cohesive, and authentic to my background. Whenever uncertainty exists, prioritize clarity, storytelling, and systems thinking over visual novelty.
